

LSU HEALTH COORDINATOR COMPETENCIES

PROTOCOL COMPLIANCE

Protocol Feasibility

While the Sponsor has the final say in whether a study should be conducted at one of our sites, it is just as important for the local study team to assess whether a proposed study is a good fit for our sites and research portfolio.

The following are questions that the study team should ask themselves to help with the decision to participate in a certain study:

- Have we worked with this sponsor before? Was the partnership successful?
- Is the site enrollment goal (N) realistic?
- Is the enrollment rate realistic?
- Is the enrollment period realistic?
- Will our patients benefit from the study?
- Is the study scientifically sound?
- Do we have any competing studies in our research portfolio?
- Is the time commitment feasible?
- Is the staff sufficient to conduct this study?
